1. Highlights

British Columbia's (B.C.'s) agrifood and seafood industry includes primary production in agriculture, aquaculture, commercial fisheries and the processing of food and beverages.

» VALUE OF B.C.'S AGRIFOOD AND SEAFOOD INDUSTRY

- Sales: **\$13.0 billion**, up 7.6 per cent over 2014.
- Total 2015 sales include:
 1. Primary Production Agriculture Farm Cash Receipts: **\$3.08 billion**
 2. Aquaculture and Commercial Fisheries Landed Values: **\$0.87 billion**
 3. Food and Beverage Manufacturers Shipments: **\$9.09 billion**

Note: Totals may not agree due to rounding.

» PRIMARY AGRICULTURE

Climatic conditions in the province make it possible for B.C.'s farmers to grow well over 200 commodities. Total farm cash receipts from the sale of crops, including grains, oilseeds, tree fruits, berries, grapes, field and greenhouse vegetables, floriculture, nursery, forage and other crops, amounted to over \$1.51 billion in 2015, up 5.5 per cent over 2014 and up 14.6 per cent over the previous five year average of \$1.32 billion. Total livestock receipts, from the sale of cattle, hogs, poultry, eggs, dairy, honey and other animals and animal products also amounted to over \$1.53 billion, up 3.2 per cent over 2014 and up 13.2 per cent over the previous five year average of \$1.35 billion.

In 2015, B.C. producers led the nation in sales of blueberries, cherries, raspberries, Brussels sprouts, apricots, and rhubarb. Fourteen of B.C.'s crops ranked second in national sales: floriculture products, nursery products, greenhouse peppers, greenhouse tomatoes, mushrooms, greenhouse cucumbers, grapes, cranberries, peaches, lettuce, pumpkins, pears, garlic, and nectarines.

» AQUACULTURE AND COMMERCIAL FISHERIES

Aquaculture farm gate sales, from farmed salmon, clams, oysters, mussels, and other cultured shellfish, finfish and marine plants, totaled almost \$0.50 billion while commercial fishing landed values totaled \$0.37 billion. B.C. seafood producers led the nation in sales (in 2014 – the most current national data available) of wild salmon, halibut, rockfish, hake, tuna, dogfish, farmed salmon, clams, oysters, squids, sea cucumbers and sea urchins.

» FOOD AND BEVERAGE PROCESSING

The province's food and beverage manufacturing sector is among the largest in the province, generating close to \$9.09 billion in sales in 2015, an increase of 9.1 per cent over 2014 and 16.6 per cent over the previous five year average of \$7.79 billion.

Source: Statistics Canada and Adapted from Statistics Canada. CANSIM Tables 002-0001; 001-0006; 001-0009; 001-0013; 001-0014 and direct files obtained from Statistics Canada, Division of Agriculture; B.C. Ministry of Agriculture, 2015 Seafood Year in Review; and Fisheries and Oceans Canada, Commercial Fisheries Landings.

1 – Includes consumption eggs and hatching eggs.

2 – Excludes queen crabs.

3 – Canadian estimates for prawn receipts are not available.

4 – Rockfish is reported as "redfish spp" in the Canada data released by Fisheries and Oceans Canada.

5 – For seafood, B.C.'s national ranking is based on 2014, as the Canadian data for 2015 was not available as at August 2016.

na – not available.

Note – In 2015, from the list of British Columbia's top 30 primary commodities, the province led the nation in receipts from blueberries, farmed salmon, halibut, mushrooms, other crab, raspberries, rockfish, sweet cherries, and wild salmon. The province ranked second in national receipts for cranberries, floriculture, grapes, greenhouse vegetables, and nursery products.

Certified Organic Products	63	na
In Transition Organic Products	8	na
Uncertified Organic Products	264	na
Total Farms Reporting Organic Products for Sale	333	na

Source: Statistics Canada. Census of Agriculture, 2006 and 2011.

1 – The total number of farms reporting organic products for sale does not equal the sum of the farms reporting in each category because a farm could be counted in more than one category.

na – not available

Note – In Census 2006 producers were asked to identify commodities grown that were certified, in transition, or uncertified; and in Census 2011, producers were asked to report only those products that were certified or in transition to be certified organic production.

1 – The farm type is based on the North American Industry Classification System (NAICS) farm-typing categories. NAICS is revised periodically. The 2001 farm-type data were derived using the NAICS 1997, the 2006 farm-type data were derived using NAICS 2002 and the 2011 farm-type data were derived using NAICS 2007.

Source: Adapted from Statistics Canada. Tables 001-0013 and 001-0012, 001-0014, CANSIM database (accessed June 2016).

1 – Includes Chinese cabbage and regular cabbage.

2 – Includes baby carrots and regular carrots.

3 – Includes leaf lettuce and head lettuce.

4 – Tonnage of potatoes based on conversion of hundred weight divided by 22.045855

F – Too unreliable to be published.

na – not available.

Note – Some totals may not agree due to rounding

x – Suppressed to meet the confidentiality requirements of the Statistics Act.

1 – Source: Canfax, 2015 Annual Report (Special request, April 2, 2016), unless otherwise specified.

2 – Canada's grading system describes the predicted carcass value of live cows even though the cow carcasses have not been graded. D1 cows have excellent muscling, with less than 15 mm of firm, white or amber coloured back fat. D2 cows have medium to excellent muscling, with less than 15 mm of white to yellow back fat. D3 cows have deficient muscling with less than 15 mm of back fat. D4 cows have deficient to excellent muscling with greater than 15 mm of back fat. D1 and D2 cows are predicted to have the highest carcass value.

Source: Statistics Canada and Adapted from Statistics Canada Table 002-0043, CANSIM database (accessed: May 9, 2016).

1 – Wheat excluding durum, other includes wheat used for animal feed, as well as for the production of ethanol.

2 – Barley prices include the weighted average prices of feed and designated barley. Designated barley is used in the production of food and beverages for human consumption.

na – not available.

Note – Starting in crop-year 2012-2013, following the enactment of Bill C-18, the Canadian Wheat Board is no longer the sole purchaser of wheat and barley for domestic human consumption and export. Producers now have the option of selling their grain directly to buyers.

Source: Statistics Canada. Table 002-0001, CANSIM database (accessed May 2016).

1 – Includes deferred grain receipts and liquidation of deferred grain receipts.

2 – Includes mushroom and potato receipts.

3 – Farm cash receipts (FCR) represent the sale of agricultural commodities, program payments received from government agencies, and payments received from private crop and livestock insurance programs within the calendar year. The method for establishing FCR is based on the system of National Accounts. As such, farm-to-farm sales between provinces are included as are all sales outside the sector, while all inter-farm sales within a province are excluded.

Source: Statistics Canada. By special request and Table 002-0001, CANSIM database (accessed May 2016).

1 – Deferred grain receipts include receipts from grain crops that are sold in a year other than the year they were produced.

2 – Liquidations represent the deferred sales of crops that have been reviewed and revised by Statistics Canada, to properly reflect the year in which the crop was actually sold.

3 – Estimates by B.C. Ministry of Agriculture.

na – not applicable.

Note – Totals may not agree due to rounding.

x – Suppressed to meet the confidentiality requirements of the Statistics Act, however confidential estimates are included in commodity group total overall estimate.

Source: Statistics Canada and Adapted from Statistics Canada, Tables 001-0013, 001-0006, 001-0009 and 002-0001, CANSIM database (May 2016).

1 – Degree of dependency on insect pollinators (in fractions).

2 – Fractional proportion of all pollinators (honey and bumble bees).

3 – Annual Crop Value attributable to honey bee and bumble bee pollination.

F – Too unreliable to be published.

4 – Due to the unavailability of Farm Gate Value, Farm Cash Receipts have been used instead.

5 – Bumble bees and honey bees are used in greenhouse pepper pollination.

6 – Only bumble bees are used in greenhouse tomato pollination.

1 – Includes farm operators involved in one or more unincorporated farms (with gross operating revenues of \$10,000 or more) or incorporated farms (with gross operating revenues of \$25,000 or more). The unincorporated sector consists of individual tax filers who reported positive gross farm income or non-zero net farm income on their Canada Revenue Agency (CRA) T1 General, Income Tax and Benefit Return. The incorporated sector consists of all corporations classified as engaging in farming activity (50% or more of their sales come from agricultural activities) that reported total sales of \$25,000 and over on their CRA T2 Corporation, Income Tax Return.

2 – Includes feedlots.

Source: Adapted from Statistics Canada. Table 203-0021, CANSIM database (accessed July 15, 2016).

1 - Due to changes in methodology, CANSIM table 203-0021 replaced CANSIM table 203-0002 in 2010. As a result, the estimates for 2010 and subsequent years are not comparable with years prior to 2010.

2 - A 4-year (2010-2013) average is used due to non-comparable data in years prior to 2010.

F - Too unreliable to be published

Note - As of August 2016, the most current data available is for the year 2014.

Note - Some totals may not agree due to rounding or lack of unpublished data.

¹ – In fresh equivalent weight.

² – Alcoholic beverages data for the Canadians aged 15 years old and over.

Note – Consumption estimates have been adjusted for retail, household, cooking and plate loss.

9. End Notes

- ▶ **F** – Data is too unreliable to be published.
- ▶ **na** – Data is not available, or no longer collected.
- ▶ **x** – Data is suppressed to meet the confidentiality requirements of the Statistics Act.
- ▶ **Average 2010-2014** represents the average calculated on the data available for the time period from the year 2010 to 2014.
- ▶ **Farm Gate Value (FGV)** represents remunerations obtained at the “Farm Gate” and is concerned with gross returns to growers during the period in which the crop is grown.
- ▶ **Farm Cash Receipts (FCR)** represents the sale of agricultural commodities, program payments received from government agencies, and payments received from private crop and livestock insurance programs within the calendar year. The method for establishing FCR is based on the system of National Accounts. As such, farm-to-farm sales between provinces are included as are all sales outside the sector, while all inter-farm sales within a province are excluded.
- ▶ **Land in Agricultural Land Reserve (ALR)** Reported land in the ALR is based on manual mapping method (Dot Matrix or electronic planimeter 1974). Since April 2012, the Agricultural Land Commission adopted the more accurate Geographic Information Systems (GIS) method of reporting the ALR area. In the new reporting system, the provincial ALR is smaller than previously reported by about 137 000 hectares. It is important to note that the physical (on the ground) area and boundary of the ALR has not changed, except for where approvals were given for inclusions and exclusions of land. Only the methodology in which the ALR area is accounted for has changed, to reflect the improved accuracy available using digital mapping information.
- ▶ **Totals** may not add up due to non-availability of detailed data, confidentiality or rounding on conversion.

10. Data Sources

- ▶ Production, farm cash receipts, manufacturing shipment values, and employment data sourced from Statistics Canada.
- ▶ Specific industry data obtained from industry associations, where necessary.
